

Personal Project

Mobile App Programming

Personal Project

- The topic of **personal project** is “implementing your own application” with **free subject**.
- There are only 3 restriction points : **your application must contain following functionalities.**

Various Activities	Your application must contain more than or equal to 3 activities .
Opensource API	Your application must communicate with Opensource API and it must connect with Networking.
Using Kotlin	Your application must made by kotlin language.

Criteria – UI/UX (30 points)

- Your application should be **easy to use**, and **comfortable to see**.
 - This means, your points will be deducted when:
Text is too hard to read, View is too small to touch, View is not properly aligned, View is overlapping strangely, Navigation(back button) is not working properly, ...
 - cf) <https://material.io/design>
- **Open source UI** is allowed...,
but you must write its original source(Github Link) in your report.
- When your level of UI/UX is similar to weekly lab session, you can get minimum 10 pts to this section.

Criteria – Implementation (40 points)

- Your application must contain **all three restrictions** of android that we explained during this semester. (mentioned on **page 2.**)
 - If you missed any of the restriction, you **will get 0 point.**
- Your score will be deducted according to the seriousness and the number of the bugs
 - UI/UX related minor bugs will not be counted in Implementation
 - Critical bug example : application terminates with unexpected error
 - Minor bug: all bugs not mentioned above
- When your level of implementation is similar to PA1 and PA2, and there are no bugs, you can get minimum 15 pts to this section.

Criteria – Novelty (10 points)

- **Not copied (5 points):** Your application must have some different things than our lecture contents.
 - ex) If you made Korean wordle, you get 0 point for this.
 - ex) If you use only API dealt in lecture, you get low point for this.
- **Level of Novelty (5 pts):** If you take on a different topic than other submissions, you'll get a higher score.

Criteria – Presentation & Demonstration (15 points)

- You must submit presentation video on iCampus until **12th June, 23:59**.
 - Presentation must be less than 5 minutes. (3 pts)
 - Your presentation must contain the subject of your application (3 pts).
 - Your presentation must contain the challenge of your implementation (3 pts).
- You must submit your code on iCampus until the same day of your demonstration day **17th June, 23:59**
 - **If you submit after this due, you will get minus 10 pts.**
- You must **attend on class time of last week** and demonstrate. (6 pts)
 - You will run your code followed by TA's instruction. **Bring your Laptop.**
 - **If you do not attend, you will get 0 point for presentation & demonstration.**

Criteria – Report (5 points)

- You must give us **report that contains usage of your application.**
- Your report must contain how you implemented your application.
- You **must not copy & paste your codes** in reports.
- **Report format** is uploaded on ICAMPUS, you must use it.

Submission Summary

- Presentation Video
 - Take a video following the guideline of page 6.
 - Submit on iCampus, until **12th June, 23:59**.
- Report
 - Use the format and write down report following the guideline of page 7.
 - Submit on iCampus, until **12th June, 23:59**.
- Project Code
 - Export to Zip, Submit on iCampus, until class time of last week , **23:59**
- Demonstration
 - Come to classroom with your laptop on class time of last week , at your designated time.
- **Delayed Submission NOT Accepted**

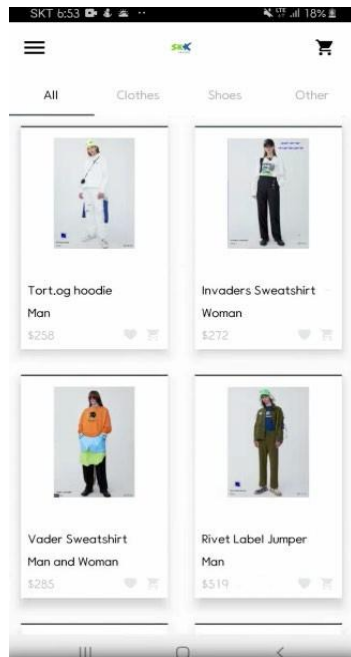

Restriction

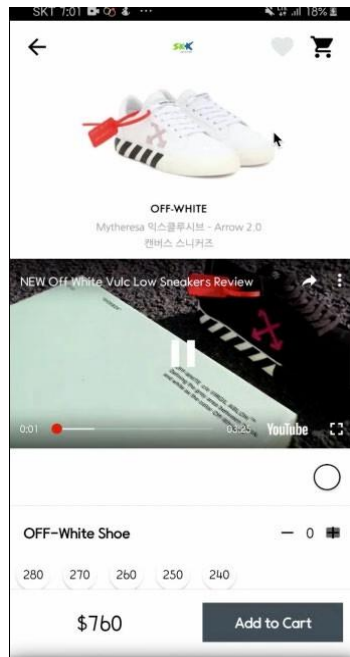

- **You must not copy** others' codes (code posted on web & friends & ...).
- If you use an open-source codes with proper license, you must **write the reference sources**.
 - Proper license example: open-source code with MIT License
 - If you don't, you may get **0 points**
